6. *Kurt Vandenberghe*, Director- DG Research and Innovation

### **13.15-14.00- Discussion with audience& panel**

On the occasion of the book launch of the *International Handbook on Responsible Innovation. A global Resource.* (*René von Schomberg, Jonathan Hankins eds.*) a series of international events (among other in Leiden, Brussels and Milan) will take place to discuss the challenges ahead of us for the further development and implementation of responsible innovation. Participation to these events are free but because of limited available seating, prior registration is necessary (email: [rene.vonschomberg\( ad\) hotmail.com](mailto:rene.vonschomberg@adhotmail.com))

We invite anyone who is not able to attend, to participate through submitting your question/comments on: <https://renevonschomberg.wordpress.com/challenges-for-responsible-innovation/> You can phrase your question/comments in terms of the hurdles you see for the implementation of responsible innovation, for example for research and innovation practices, for business operators or for the engagement of knowledge actors. A selection of the questions will then be submitted to the panel-discussants and a summary of responses of the panels will be published on these pages. Leaving your questions/comments on the website will imply that it will be published with your name. You can submit your comment/question by using the reply button at the bottom of the webpage, below the programme announcements.

The International Handbook of Responsible Innovation is thus a guidebook for a shift in stance toward collective accountability for the products and consequences of our own ingenuity.’

– Daniel Sarewitz, Arizona State University, US
