**Academic Integration**

The mission of JGU is to create a model of excellence for the education of the future scholar. This is being achieved by providing high quality teaching, interdisciplinary curriculum, and diverse and collaborative environments for research. JGU has 9 interdisciplinary schools which combine the global experience of national and international faculty to impart social sciences education to students who come from 20 different countries of the world. 37% of JGU faculty is international that 50% of total faculty are within top 200 universities.

- **JGU is committed towards including technology in the pedagogy: aiming for better regional and global access, learning outcomes and strengthened engagement experience.**
- **Aims to embrace digital literacy by incorporating data science, forensic science, and social justice policy.**
- **Enhancing postgraduate education through open research.**
- **Creating interdisciplinary programs in contemporary cybercultures.**
- **Advancements in pedagogical innovation and interdisciplinary research.**

**JGU Integrates technology in following ways to enhance social science and humanities education in university space**

**Social Impact and Innovation**

JGU is driven by desire to make positive impact in social and community development and contribute in national and global policymaking. JGU has research initiatives that directly work on intersections of innovation and technology, policy, law, economics and societal impact, thus presenting a perfect example of how technology can be blended with humanities to make a positive social impact.

- **Future Launch Social Enterprise Programme: Programmes on running a social enterprise through MOOC.**
- **Project on impact learning: Impact point 2020.** The first of its kind online course on national and global impact learning.
- **Project on Meaningful Impact through Technology.** To analyse the possibility of using technology to drive and measure social impact.
- **Social Entrepreneurship Quizzes:** Use of psychometric tests to predict the likelihood of someone becoming a successful entrepreneur.

**Administrative Integration**

JGU has integrated technology in its administrative capacity. As a world-class institution aiming at empowering student experience, JGU believes in preserving the art infrastructure infused with latest technological advancements.

- **JGU has a dedicated IT and innovation office and has created a special post for Chief Innovation Officer.**
- **Fully digitalized campus environment.**
- **Employment of ERP system to streamline processes in academia (Admissions, human resources, [HR],] and general administration of the university (GKUHR app).**
- **Research works of faculty members on campus.**
- **JGU Global Library and other learning systems provide facilities like resources, Drupas, remote access, online repository of books, journals, multimedia files.**
- **The library has facilitated the creation of ORCIDs for faculty members.**
- **Research works of faculty members on campus.**

**Key facts**

- **JGU faculty increasingly utilizes innovation teaching tools and new pedagogies to engage students more effectively.**
- **JGU considers research and knowledge creation as significant responsibilities of a university for creating larger social impact.**
- **It believes in fostering a vibrant research environment for promoting cutting edge, interdisciplinary research especially on social issues and making that research accessible to the wider public through web-based platforms, research-based commentaries, webinars, social media and traditional media.**
- **JGU carries out research studies and offers courses that are based on intersection of higher education, technology and policy.**
- **JGU promotes fundamental research and innovations in understanding human behavior.**
- **It combines elements of psychology, criminology, sociology, forensics to study human and social behavior.**
- **JGU has a dedicated forensic lab and psychometric lab to carry social experiments.**

**Conclude:** JGU as an university has institutionalised technology and innovation as essential components of its teaching and learning systems. However, as a global university located in a rural space it is constrained by certain limitations for e.g. limited availability of robust technology, supporting infrastructure, and support of surrounding community. Additionally, distance from a metropolitan city makes it difficult for the students to access with required expertise. Nevertheless, it is relentlessly working towards overcoming these limitations and pursuing the remaining goal of achieving excellence in the education is an eternal belief in which Robert J. Enkeus once said, "human spirit must prevail over technology."
